Your Comments:

We want OUR RIVER made safe for people and for wildlife and we want polluters to be held accountable. The draft cleanup plan leaves far too much of the river contaminated for generations to come. There needs to be at least 1,000 acres of polluted sediment removed from the river. The plan relies too much on "monitored natural recovery," a "do nothing" strategy that leaves pollution in the river in the hopes that it will either be covered over or flushed downstream. The Cleanup Plan must result in the removal of the Fish Consumption Advisory so that eating fish from the Lower Willamette is just as safe as eating fish from anywhere else in the Willamette River System and this must occur within a 10-20 year time frame. Creating a toxic waste disposal dump in our river is not acceptable—toxic dredged sediments must be taken to an appropriate landfill. Entities with liability for the pollution must be held accountable and pay for a comprehensive cleanup that will protect the health of our communities, our environment and our wildlife.
Thanks for taking these concerns into consideration.
